Problem Statement

A ML Algorithm to test the sleepiness of the driver and alcohol testing from the sensors deployed on the dashboard/sterring wheel of car.

About the Project

OBJECTIVES

- 21 percent of all fatal accidents are due to drowsy driving. 60 percent of adult drivers or about 168 million people have driven a vehicle while feeling drowsy in the past year. About 37 percent or 103 million people have fallen asleep at the wheel, according to the National Sleep Foundation's [NSF] 2005 poll.
- In order to prevent this, we provide this model & solution

LIBRARIES IN USE

- Matplotlib
- Numpy
- Pandas
- TensorFlow
- OpenCV

➤ Project Barriers

Dataset size ?

As of now, there are over 9000 images dataset.

The subdomains that we have, so do we need to make a physical device or software device work too? (tinkercad)
